Matched sentences6

In 1905, Albert Einstein published the first explanation of the photoelectric effect, but at the time, it was impossible to resolve the timescales that were relevant for this effect. For a long time, physicists assumed the effect was instantaneous. Einstein was eventually awarded the 1921 Nobel Prize in Physics "for his services to Theoretical Physics, and especially for his discovery of the law of the photoelectric effect". Parenthetically, when he gave his Nobel lecture, it was not in Stockholm in December 1922 (Einstein was in Japan at that time), but in the middle of the summer of 1923, in Gothenburg – a unique event in the history of the Nobel Prize. His talk did not concern the photoelectric effect but the theory of relativity, the theory for which he was never awarded a Nobel Prize. The fundamental question that this year's Laureates made it possible to pose was "what is the timescale for the photoelectric effect?"
